

RapidSOS Portal

FEATURE SPOTLIGHT

Jurisdiction View

Jurisdiction view provides telecommunicators with a **master view of all emergencies on one map** and web-based access that provides continuity of operations during network failures, outages, and natural disasters.

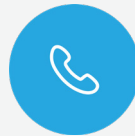

Jurisdiction View Benefits

Master view of all emergencies

Automatically displays real-time data to help telecommunicators easily manage calls across your region with unprecedented situational awareness.

Quickly access data for calls

Provides access to life-saving location and additional data, including medical profile, alarm, and vehicle crash data, from the RapidSOS Platform.

Offers continuity of operations

Supports the safety and security of local citizens, when your 911 system experiences a service outage or a natural disaster.

How it Works

- 01 The 9-1-1 telecommunicator logs in to RapidSOS
- 02 9-1-1 calls or texts automatically populate on the satellite map
- 03 The person in need's accurate location is displayed on the map as a pin and updates in real-time
- 04 When available, additional data from over 350M connected devices recognized as RapidSOS Ready, will also be accessible

Had it not been for RapidSOS and Jurisdiction View, we would have been dead in the water, we would not have been able to receive any type (of 9-1-1) call. They weren't even able to get a call out to the resolution center to get our 9-1-1 calls rerouted because they were down as well. Our team used Jurisdiction View and made call backs to every call they got."

CASSIE LOWERY

Assistant Director
Rutherford County Emergency
Communication District, TN

If you are interested in using Jurisdiction View, please reach out to esm@rapidsos.com to learn more about your Emergency Communication Center's eligibility and how to access this free feature in RapidSOS.
